

10/725,352

**IN THE SPECIFICATION**

**1. Please replace paragraph [0008] as follows:**

[0008] An advantage of the present invention is a method for the composition and employment of a customized vocabulary of resources, which are expectedly defined by programmers under the direction of business user advocates. This step transforms entities from a programmer's world to a business user's world, enabling business users to manipulate entities in their own terms (e.g., individualized language). The original entities are known as actual resources (ARs), and the transformed entities are known as virtual resources (VRs). See U.S. patent Ser. No. \_\_\_\_\_ having Attorney Docket Number YOR920030126US1 United States Patent Application Serial No. 10/665,564, entitled "Virtual Resources Method, System and Service," to Degenaro et al., filed September 22, 2003, which is incorporated herein by reference.

**2. Please replace paragraph [00130] as follows:**

[00130] Embodiments according to the present invention have several non-obvious advantages over other systems, as mentioned herein. An advantage of the present invention is a method for the composition and employment of a customized vocabulary of resources, which are expectedly defined by programmers under the direction of business user advocates. This step transforms entities from a programmer's world to a business user's world, enabling business users to manipulate entities in their own terms (e.g., individualized language). The original entities are known as actual resources, and the transformed entities are known as virtual resources. (See U.S. patent Ser. No. \_\_\_\_\_ having Attorney Docket Number YOR920030126US1 United States Patent Application Serial No. 10/665,564, entitled "Virtual Resources Method, System and Service," to Degenaro et al., filed September 22, 2003, which is incorporated herein by reference.)
